Abstract: *The purpose of writing an article on this topic is that we need to use as many innovations, conditions, effective teaching methods, modern textbooks and, most importantly, the benefits that are created for us.*

Key words: *educational system, system management, socio-economic, innovative ideas, healthy generation, effective teaching, modern and effective methods, education participants, human values.*

As long as humanity exists, it always strives for progress and achieves new scientific achievements. The educational system ensures the delivery of these scientific innovations to the next generation. In fact, during the transition to market relations, a strong social protection system was formed, and now it remains an important issue. Today, there is a movement to move to a new stage in the implementation of social policy based on quality. One of the important results of the reforms implemented in Uzbekistan is determined by the increasing importance and place of the social protection policy in building a democratic society. President Sh. Mirziyoyev signed the new law "On Education". This is definitely an important step for us young people. The main goal of the law is to provide mechanisms for effective cooperation of education participants, including types and forms of education, system management, quality control, and activities in the field of education. One of the main aspects of the law is that instilling national and universal human values into education and upbringing, which has not been defined as the main principle until now, is being paid special attention to in the organization of education in our country. Now this principle has been established by law. The state ensures the creation of favorable socio-economic, organizational and legal conditions for attracting investments aimed at the development of the education sector, the activities of educational organizations, as well as the protection of the rights and legal interests of investors, including foreign investors in this field. Based on the experience of Japan, Korea, Singapore, Great Britain, Germany, France and other countries, the educational system and effective teaching have changed radically. Education is the lifeblood of the country's future. Every country struggles to create a strong education system and improve it regularly. Strategy of actions on five priority areas of development of the Republic of Uzbekistan in 2017-2021" approved by the decree of the President of Uzbekistan dated January 22, 2018 "Year of supporting active entrepreneurship, innovative ideas and technologies "in paragraph 172 of the state program on

implementation, the task of developing a new draft of the Law of the Republic of Uzbekistan "On Education" was defined. The transition to market relations has also placed new demands on the Healthcare sector. In particular, reducing administrative expenses; use of low-cost and effective methods during the treatment of patients; transferring a part of the work volume of hospitals to polyclinics, reducing the number of less efficient places; payment for works performed on the basis of the contract and other measures are being taken.

Public health protection largely depends on the activity of the state epidemiologic service. In Uzbekistan, sanitary-epidemiological stations and "Health" centers, which carry out organizational and coordination work on the formation of a healthy lifestyle among the population, perform this task. In the republic, the "Health" Institute, its branches in the regions and cities widely promote sanitary hygiene knowledge among the population using radio, television and the press. A network of institutions providing specialized medical assistance to children was established. The program "For a healthy generation" developed in the republic, first of all, on the basis of regular medical examinations, aims to identify sick and weak schoolchildren and adolescents, and implement measures to improve their health and the young generation in general. After the independence of Uzbekistan, the reform of the public health protection sector began again, the main principle of the health care system is to restore the preventive direction; development and implementation of its modern and effective methods; strengthening maternal and child health protection measures; improvement of the medical education system and personnel training; reorganization of scientific research based on the requirements of the era and society; to create an industry in the country that produces high-quality and sufficient quantities of pharmaceuticals, medical supplies, and technical tools related to this field; Further improvement of the material and technical base of healthcare institutions; The main task was to remove part of the treatment and prevention institutions from state ownership and change the form of ownership. The purpose of writing an article on this topic is that we need to use as many innovations, conditions, effective teaching methods, modern textbooks and, most importantly, the benefits that are created for us. It is not an exaggeration to say that one of the important goals of the youth of Uzbekistan is to create facilities created by the youth of a country with an improved educational system. It is important for us for our country to rise, to be among the developed countries, to be worthy of the generation of our great grandfathers, to strengthen the knowledge we are getting and to be able to apply it in practice. The words of the late first President I.A. Karimov - "Our children must be more educated, stronger, smarter, wiser and certainly happier than us" will be the foundation for us young people to have more strength, hope and, most importantly, the goal for our future.
