**Annotation:** *This article discusses the role of education in guiding primary school students to the profession. The basis of success in primary grades is determined by the quality of the teaching process conducted with children. In this, advanced pedagogical technology is of great importance.*

**Key words:** *Primary education, pedagogical conditions, game methods. Interactive methods, career guidance, development, innovation.*

One of the main goals of the educational system is to direct the student youth to future professions by providing them with proper education and training. Discipline is the main branch of science to accomplish this goal. Today, in the world community, special attention is paid to the implementation of the achievement of the harmony of language and thinking in the educational system through innovative technologies as a driving force for the development of the state and society. It is considered important to form the mental thinking of students, the system and speed of thinking, to educate them in the spirit of patriotism, humanism. The individualization of teaching methodology in the world practice of the educational system and the introduction of modern technologies based on the integration of competency approaches are considered as a leading factor in ensuring the quality of Education.

The penetration of modern technologies into the educational system is considered important not only in the education and upbringing of students in keeping with the times, but also in terms of the formation of a number of other positive qualities in them. A number of changes have also taken place over the next few years in conjunction with the introduction of digital technology into the educational system. In particular, new academic subjects were introduced in schools, and a number of subjects were reduced. New textbooks were created for the introduced subjects. Including, in 2020, the Ministry of public education of Uzbekistan published a draft resolution of the Cabinet of Ministers "on measures to gradually introduce the discipline "upbringing" into practice in general secondary educational institutions" for public discussion. It is envisaged that the subject of "upbringing", which is introduced according to this decision, will be introduced in a state that combines such disciplines as "etiquette", "sense of Homeland", "history of world religions", "idea of national independence", which are in force in general secondary educational institutions. On July 6, 2020, in accordance with Resolution No. 422 of the Cabinet of Ministers of the Republic of Uzbekistan, a resolution was adopted "on measures

to gradually introduce the subject of “upbringing” into practice in general secondary educational institutions”. The decision sets out such issues as the creation of educational materials, textbooks from the surface of the subject “upbringing”, which subject specialists teach in the school from this subject.

In primary education, the main goal of the “upbringing” FA is to educate conscious individuals with intellectual potential, relying on universal values, traditions and traditions of the harmonious, spiritually rich heritage of the people that meet today's demand. Textbooks on "upbringing" for primary classes were first published in 2020. Current textbooks were published in 2023. In the preparation of textbooks on “education”, the Japanese subjects “Moral Education”, Singapore's “character and civic education”, the UK's “public education “and” contemplation ” were closely studied. It will not be an exaggeration to say that the states listed below today are able to become an example to the whole world with the upbringing of their youth, their erudition and the forgiveness of their inhabitants based on the principles of active citizenship.

The focus on the field of education in our country is growing. In particular, on February 5, 2024, under the presidency of President Shavkat Mirziyayev, a video projector was held on the priorities to be implemented in the areas of education, health, digitalization, culture and sports. In this video, problems in preschool education, school education and higher education were considered. The fact that such problems are considered at the presidential level at the beginning of the year is clear evidence of this. “Secondary special education is carried out in academic lyceums on the basis of nine years of basic secondary education for two years and ensures the rapid development of the intellectual abilities of the learners, as well as deep, differentiated, vocational and personality-oriented education.”

Today, having mastered modern knowledge and professions, foreign languages, stepping into life with great hope and confidence, a teacher in the worthy maturation of our children, who are the decisive force of our tomorrow, and

it should be noted that the contribution of our coaches is invaluable. The elementary education teacher not only gives students the initial knowledge of the world of science, but also directs students to the profession in this process. Since childhood, the student is fond of any profession, dreams of it, imagines himself as the owner of that profession. On the basis of the discipline, there is a growing interest of students in this field of science. Professional orientation of the individual is a special scientific practical activity

through which, in the stages of the formation of students as human beings, the individual and society that is, the family is considered as a single system, the requirements of the relations of the market economy during the transition period are taken into account.

Criteria indicating the readiness of students to choose a profession:

- ✓ knowledge of the moment (the fact that it has information);
- ✓ criterion of interest in the profession;
- ✓ a practical criterion.

The study of the personality of students is closely related to their upbringing. The teacher, noticing the individual characteristics of the student, can find methods for the

development of existing talent badges in him, eliminate negative aspects of his behavior, etc. k. In some children, the predisposition to the profession is well manifested, in most children this thing is not detected at once. It is important for the teacher to identify the signs of talent in the child, to support me in the development and formation of their abilities.
