

THE CONCEPT OF "PATIENCE" IN THE LANGUAGE LANDSCAPE OF THE WORLD

Lobarkhon Sobitovna Artikova

Lecturer at the Department of Western languages, TSUOS, Uzbekistan

Annotation: *This article is devoted to the linguistic, linguistic study of the concept of patience, and comments on the fact that the concept of "Patience" is one of the most complex and multifaceted concepts from the point of view of philosophical, religious, linguistic philosophy and linguoculturology. In addition, the article pointed out that in modern society, it is important for every person and nation to approach closely related concepts such as "Patience" and "Tolerance" with a unique approach.*

Key words: *national masterpieces, linguocognitive, linguoculture, "Patience" concept, linguophilosophy, proverbs.*

It is not a secret that all religions are born on the basis of moral values, despite this, among religions, Islam encourages people to be patient and tolerant more than other religions. The concept of "Patience" is considered important for revealing the essence of a number of other concepts in the linguistic culture of Uzbek. The concept of "patience" reflects the world view of that nation in different language cultures and systems of concepts. Such words act as a storehouse of national conceptual knowledge about the world in the form of a national language system. Despite the fact that these two concepts are closely related to each other, at the same time they are different, the activation of the concept of "patience" in the Uzbek language, its idiomatic meaning and aspects reflected in phraseology are highlighted.

As Ye.S.Kubryakova pointed out, when analyzing the national mental lexicon of a certain nation, usually the concepts and models leading to the word are considered first, and then its expression in the minds of the speakers, mental features and language. In addition to the lexicon, the properties of the linguistic person in the personal lexicon are studied.

The concept of "mental lexicon" is of particular importance in cognitive linguistics. Based on the representation of the mental lexicon, it becomes easier to identify the main concepts in the language and describe the linguistic landscape of the world. The concept of "patience" is one of the complex and multifaceted concepts from the point of view of philosophy, religion, linguo-philosophy and linguo-culture. In modern society, it is important for every person and nation to approach closely related concepts such as "Patience" and "Tolerance" with a unique approach. Despite the fact that these two concepts are closely related to

each other, at the same time they are different. It is a special ability of people to patiently listen to the opinions of others. In the linguistic landscape of the Uzbek world, the view that people should always be patient until the end of their lives is the main mental characteristic of the Uzbeks. The concept of "Patience" is the main component of the macro concept of "Destiny" and occupies an important place in the life of many peoples. From the analysis of the national and universal features of the concept of "Patience" in different linguistic cultures, it can be seen that in the world linguistic landscape of different peoples, the concept of patience is expressed by lexemes such as "endurance" and "tolerance".

It is known that in cognitive linguistics, phraseological and parameological materials that reflect the wisdom of a certain people over the centuries, the views and culture of the society belonging to that people are important. It is in phraseology that the figurative systems of the national linguistic landscape of the world and their uniqueness are most manifested, because proverbs and phraseological units are the soul of any national language, in which the national psyche of that people is expressed in its own way.

Parameiological (proverbs) foundation of the language. The parameiological fund of the language can be called a jewel box made up of national masterpieces and firmly rooted in its culture. It is known that proverbs and proverbs are widely studied as genre texts in folklore studies. Their study in linguistics, especially in linguistics and cultural studies, is just beginning.

The concept of Islamic education and patience is at the core of the linguistic landscape of the Uzbek national world, while the concept of impatience stands in binary opposition to it. Through both concepts, there are signs of evaluation of people.

"Patience" is a special Islamic quality in the world view of Uzbeks, and it has been reflected in the dictionaries of the Uzbek language for several centuries. The expansion of the conceptual components of the concept of "patience" in various ways, such as patience and endurance, shows that the concept of patience remains an integral part of the Uzbek national mentality. Analyzing the materials of various literatures and religious sites available in the modern Uzbek language, the analysis shows that today the meanings that Uzbek speakers attach to the word "patience" are wider and more colorful than before. In the minds of modern Uzbeks, being patient is also understood as the ability to move steadily and persistently towards a goal.

From the above, it can be concluded that the concept of "Patience" in the linguistic landscape of the world of Uzbek speakers also expresses such concepts as obedience, endurance, tolerance, stability, tolerance, calmness, calmness. This shows that the concept of "Patience" needs to be studied in linguistic and social aspect.
